 System Requirements xi
 Conventions and Graphics Used in This Book xiii

Classroom Setup Guide Classroom Setup Guide-1

Lesson 1: Convergence Industry Standards and Protocols 1-1

Pre-Assessment Questions 1-2
 Defining Convergence 1-3
 Governing Organizations in Convergence Technologies 1-8
 Institute of Electrical and Electronics Engineers (IEEE) 1-9
 International Telecommunication Union (ITU) 1-12
 VoIP and Interoperability 1-16
 Internet Engineering Task Force (IETF) 1-16
 Electronic Industries Alliance (EIA) 1-19
 Telecommunications Industry Association (TIA) 1-19
 American National Standards Institute (ANSI) 1-20
 Telcordia (formerly Bellcore) 1-20
 Lesson 1 Review 1-25
 Lesson 1 Instructor Section 1-26

Lesson 2: Enabling Voice Over IP (VoIP) 2-1

Pre-Assessment Questions 2-2
 Investigating VoIP 2-3
 Investigating Gatekeepers and Gateways 2-4
 Troubleshooting VoIP 2-10
 Large Data Frames and Delay Budgets 2-18
 Quality of Service (QoS) Issues 2-22
 Voice Compression and Decompression 2-27
 Transmission Media 2-29
 VoIP Software and Hardware 2-31
 Lesson 2 Review 2-45
 Lesson 2 Instructor Section 2-46

Lesson 3: Network Convergence 3-1

Pre-Assessment Questions 3-2
 Characteristics of Convergent Networks 3-3

Circuit-based vs. Convergence Calling	3-4
Convergence Signaling Protocols.....	3-8
H-Series Protocols	3-8
Session Initiation Protocol (SIP)	3-12
Media Gateway Control Protocol (MGCP).....	3-19
Network Call Signaling (NCS).....	3-20
Bandwidth Concerns	3-20
Planning a Convergent Network	3-25
Lesson 3 Review	3-27
Lesson 3 Instructor Section	3-29

Supplemental CD-ROM Contents

Supplemental CD-ROM Contents-1

Handouts: Activities

Handouts: Activities-1

Handouts: Optional Labs

Handouts: Optional Labs-1

Handouts: Quizzes

Handouts: Quizzes-1

Handout: Course Assessment

Handout: Course Assessment-1

List of Labs

Lab 1-1: Researching standards	1-22
Lab 2-1: Configuring Windows NetMeeting for VoIP transmissions	2-34
Lab 2-2: Conducting a VoIP call using NetMeeting	2-40
Lab 3-1: Comparing codecs in a VoIP implementation.....	3-6

List of Activities

Activity 1-1: Diagramming the convergence technology governing organizations.....	1-27
Activity 2-1: Recommending voice-compression methods	2-47
Activity 3-1: Recommending appropriate network technologies	3-30
Activity 3-2: Reviewing VoIP bandwidth consumption	3-30
Activity 3-3: Designing a VoIP network.....	3-32

List of Optional Labs

Optional Lab 1-1: Researching convergence technology protocols.....	1-28
Optional Lab 2-1: Capturing voice packets using AppDancer	2-48
Optional Lab 3-1: Hosting a VoIP meeting (instructor-led).....	3-32
Optional Lab 3-2: Installing and configuring a VoIP gatekeeper and registering VoIP clients (instructor-led)	3-33
Optional Lab 3-3: Identifying specific VoIP protocols	3-37
Optional Lab 3-4: Installing and using GnomeMeeting on a Linux system.....	3-38

List of Quizzes

Lesson 1 Quiz.....	1-28
Lesson 2 Quiz.....	2-51
Lesson 3 Quiz.....	3-43

List of Figures

Figure 1-1: Common VoIP network	1-4
Figure 1-2: Enterprise toll bypass	1-5
Figure 1-3: Tie-line replacement	1-5
Figure 1-4: Fax over Internet	1-6
Figure 1-5: Voice transmission using PC phones.....	1-6
Figure 1-6: IP-based public phone service.....	1-7
Figure 1-7: Call-center IP telephony.....	1-7
Figure 1-8: IP local line doubling	1-8
Figure 1-9: Premises IP telephony.....	1-8
Figure 2-1: Comparing PSTN to Internet	2-3
Figure 2-2: Use of gateways in VoIP	2-4
Figure 2-3: VoIP gateways facilitate voice over the Internet.....	2-7
Figure 2-4: Gateway is responsible for talk path	2-7
Figure 2-5: Registering with a gatekeeper.....	2-8
Figure 2-6: Originating gateway converts called number (Step 1).....	2-8
Figure 2-7: Originating gatekeeper exchanging call setup information (Step 2)	2-9
Figure 2-8: Originating gatekeeper negotiates options (Step 2)	2-9
Figure 2-9: Originating gatekeeper completing security handshake (Step 2)	2-9
Figure 2-10: Analog-to-digital conversion by gateway's digitizing function (Step 3)	2-9
Figure 2-11: Voice signals compressed and converted to IP packets (Step 4).....	2-10
Figure 2-12: Destination gateway decompresses voice signals (Step 5)	2-10
Figure 2-13: Jitter buffer resequencing and evenly spacing data packets	2-13
Figure 2-14: Calculating moderate delay time (55 ms).....	2-14
Figure 2-15: Calculating longer delay time (115 ms).....	2-14
Figure 2-16: ITU recommends one-way delay limit of 150 ms.....	2-15
Figure 2-17: Effects of VoIP packet prioritization on data transmissions.....	2-16
Figure 2-18: Relating WAN access speed to packet size	2-17
Figure 2-19: Calculating peak bandwidth	2-21
Figure 2-20: Calculating peak bandwidth for a G.729 codec.....	2-22
Figure 2-21: Calculating residual bandwidth	2-22
Figure 2-22: IPv4 packet header showing ToS field.....	2-23
Figure 2-23: Type of Service field in IPv4 header	2-24
Figure 2-24: DiffServ Type of Service header	2-24
Figure 2-25: Time division multiplexing (TDM) of T1 line.....	2-29
Figure 2-26: Time division multiplexing (TDM) of E1 line	2-29
Figure 2-27: Telecommuter using DSL service	2-32
Figure 2-28: Advantages to VoIP phone technology	2-33
Figure 2-29: Selecting Run from Start menu.....	2-34
Figure 2-30: Running conf to locate and open conferencing software.....	2-34
Figure 2-31: NetMeeting introduction screen	2-35
Figure 2-32: Example user information for NetMeeting	2-35
Figure 2-33: NetMeeting server options screen.....	2-36
Figure 2-34: Selecting NetMeeting connection speed options.....	2-36
Figure 2-35: Choosing NetMeeting launch shortcut options	2-37
Figure 2-36: NetMeeting Audio Tuning Wizard	2-37
Figure 2-37: NetMeeting Audio Tuning Wizard speaker testing.....	2-38
Figure 2-38: NetMeeting Audio Tuning Wizard microphone testing.....	2-38
Figure 2-39: NetMeeting Audio Tuning Wizard finish	2-39
Figure 2-40: NetMeeting Not In A Call dialog box	2-39

Figure 2-41: NetMeeting desktop shortcut icon	2-40
Figure 2-42: NetMeeting Help drop-down menu	2-40
Figure 2-43: About Windows NetMeeting screen displays IP address	2-41
Figure 2-44: Entering IP address to contact in NetMeeting dialog box.....	2-41
Figure 2-45: Alert box indicates NetMeeting waiting for response	2-42
Figure 2-46: Accepting NetMeeting phone call.....	2-42
Figure 2-47: NetMeeting Connection dialog indicates connection and user names.....	2-43
Figure OL2-1: Launching AppDancer.....	2-48
Figure OL2-2: AppDancer initial setup.....	2-48
Figure OL2-3: Placing a call on NetMeeting.....	2-49
Figure OL2-4: AppDancer Summary information	2-49
Figure OL2-5: Stopping analyzer program.....	2-50
Figure OL2-6: AppDancer Port Analysis—Classic	2-50
Figure 3-1: Converging various networks for voice	3-4
Figure 3-2: Options dialog in NetMeeting	3-6
Figure 3-3: Advanced Compression Settings dialog	3-7
Figure 3-4: H.323 protocol stack and classes of standards.....	3-10
Figure 3-5: H.323 provides interoperability to basic voice conferencing	3-10
Figure 3-6: TCP used for H.245 control protocol	3-11
Figure 3-7: Typical SIP transaction using proxy server.....	3-15
Figure 3-8: SIP works with existing Internet tools and protocols.....	3-15
Figure 3-9: SIP in toll-bypass scenario.....	3-16
Figure 3-10: Gateway controller and gateway communicating using MGCP	3-17
Figure 3-11: Gateway controller sending SIP message to proxy server	3-17
Figure 3-12: Proxy server uses DHCP to find a location server	3-17
Figure 3-13: Proxy server using SIP to invite a connection	3-18
Figure 3-14: Identifying gateway functions in SIP environment	3-18
Figure 3-15: NCS embedded agent.....	3-20
Figure 3-16: Conserving bandwidth with silence suppression	3-21
Figure 3-17: Increasing duty cycle to reduce bandwidth consumption.....	3-22
Figure 3-18: Determining trunk averages.....	3-23
Figure 3-19: Residual bandwidth available for non-real-time transmission.....	3-24
Figure 3-20: Calculating available VoIP bandwidth	3-25
Figure OL3-1: After specifying correct initialization file for openh323gk.....	3-34
Figure OL3-2: Using Telnet to monitor the gatekeeper.....	3-34
Figure OL3-3: Specifying gatekeeper in NetMeeting.....	3-35
Figure OL3-4: Viewing gatekeeper registrations.....	3-36
Figure OL3-5: GnomeMeeting configuration wizard.....	3-39
Figure OL3-6: GnomeMeeting initial screen	3-39
Figure OL3-7: Audio Devices section in GnomeMeeting.....	3-40
Figure OL3-8: Placing call to system named puget	3-41
Figure OL3-9: H.323 Advanced dialog.....	3-41
Figure OL3-10: Audio Codecs dialog	3-42

List of Tables

Table 1-1: IEEE 802.9 network elements	1-10
Table 1-2: Convergence protocols.....	1-22
Table 2-1: Relationship of latency to perceived connection quality.....	2-13
Table 2-2: ITU G.114 delay recommendations.....	2-15
Table 2-3: Data rates for ITU compression standards based on frames per packet.....	2-19
Table 2-4: Centum call seconds (CCS) based on Erlang B assumptions.....	2-20
Table 2-5: Standardized features of ITU G-Series protocols	2-28
Table 2-6: PC phones compared to VoIP phones.....	2-31
Table 3-1: SIP response status codes	3-14
Table 3-2: Calculating 95-percent dial-tone availability.....	3-22
Table 3-3: Maximum average percentage of time that duty-cycle trunks are active	3-23

Table 3-4: WAN access link VoIP carrying capacity..... 3-24
Table A3-1: Number of hours of 95-percent available dial tone per period 3-30
